

Standard No. 208 *Occupant Crash Protection*: (a) installation of a U.S.-model seat belt in the driver's position, or a belt webbing actuated microswitch inside the driver's seat belt retractor; (b) installation of an ignition switch actuated seat belt warning lamp and buzzer; (c) replacement of the driver's and passenger's side air bags and knee bolsters if these are not U.S.-model components. The petitioner states that the vehicles are equipped with combination lap and shoulder restraints that adjust by means of an automatic retractor and release by means of a single push button in each front designated seating position, with combination lap and shoulder restraints that release by means of a single push button in each rear outboard designated seating position, and with a lap belt in the rear center designated seating position.

Standard No. 214 *Side Impact Protection*: installation of reinforcing beams.

Standard No. 301 *Fuel System Integrity*: installation of a rollover valve in the fuel tank vent line between the fuel tank and the evaporative emissions collection canister.

Petitioner states that a vehicle identification number plate will be affixed to non-U.S. certified 1994-1998 Mercedes-Benz S320 passenger cars to comply with the requirements of 49 CFR Part 565.

Interested persons are invited to submit comments on the petition described above. Comments should refer to the docket number and be submitted to: Docket Management, Room PL-401, 400 Seventh St., SW, Washington, DC 20590. It is requested but not required that 10 copies be submitted.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above address both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

**Authority:** 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: December 5, 1997.

### National Highway Traffic Safety Administration

[Docket No. NHTSA-97-3146]

#### Toyota Technical Center, U.S.A., Inc., Receipt of Application for Decision of Inconsequential Noncompliance

Toyota Technical Center, U.S.A., Inc. (Toyota) of Washington, D.C. on behalf of the Toyota Motor Manufacturing, Kentucky, Inc. has determined that some 1998 model Toyota Sienna vehicles fail to comply with 49 CFR 571.120, Federal Motor Vehicle Safety Standard (FMVSS) No. 120, "Tire Selection and Rims for Vehicles Other Than Passenger Cars," and has filed an appropriate report pursuant to 49 CFR Part 573, "Defect and Noncompliance Reports." Toyota has also applied to be exempted from the notification and remedy requirements of 49 U.S.C. Chapter 301—"Motor Vehicle Safety" on the basis that the noncompliance is inconsequential to motor vehicle safety.

This notice of receipt of an application is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or other exercise of judgment concerning the merits of the application.

Paragraph S5.3 of FMVSS No. 120 states that the recommended cold inflation pressure for the designated tire must appear either on the certification label or a tire information label.

Toyota produced 8,528 vehicles from May 12, 1997 through October 13, 1997 which do not meet the labeling requirements stated in the standard. The recommended 240KPa (35 PSI) cold inflation pressure for the designated tire (P205/70R15) is misstated on the certification label as 220 KPa (33 PSI). However, the correct tire inflation pressure appears on the voluntary-affixed tire information label and in the vehicle owners manual.

Toyota supports its application for inconsequential noncompliance with the following three statements:

1. On these vehicles, Toyota has applied a voluntary tire information label, on which the correct recommended pressure, "240 KPa/35 PSI" (at maximum loaded vehicle weight) appears, [located at] the door opening portion of the driver side B-pillar. Toyota believes that owners will refer to this tire information label rather than the certification label, making the possibility of confusion due to the different tire inflation pressures quite low.

2. The vehicle owner's manual also indicates the correct recommended inflation pressure.

3. The Maximum Loaded Vehicle Weight (MLVW)—the weight of the heaviest vehicle of the car line with full accessories, passengers in all designated seating positions, and maximum cargo and luggage load—of the Toyota Sienna is 2,365 kg. In such [a] fully-loaded condition, the rear axle is loaded more than the front [axle], resulting in a rear axle load of 1,204 kg or 602 kg on each rear tire. The load limit of the subject P205/70R15 tire inflated to 220 KPa (33 PSI) is 650 kg. Therefore, there still exists a 48 kg margin under the MLVW. Since the Sienna is a passenger vehicle—as opposed to a cargo vehicle—it is unlikely that the owner will overload it.

Interested persons are invited to submit written data, views, and arguments on the application of Toyota described above. Comments should refer to the docket number and be submitted to: U.S. Department of Transportation, Docket Management, Room PL-401, 400 Seventh Street, S.W., Washington, D.C., 20590. It is requested that two copies be submitted.

All comments received before the close of business on the closing date indicated below will be considered. The application and supporting materials, and all comments received after the closing date, will also be filed and will be considered to the extent possible. When the application is granted or denied, the notice will be published in the **Federal Register** pursuant to the authority indicated below.

Comment closing date: January 9, 1998.

(49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.50 and 501.8)

Issued on: December 4, 1997.
